INTRODUCTION

Provenance

The papers were deposited in University College London by Sir Francis Galton's executors soon after his death in 1911. They were added to by gifts from his nephew, Edward Galton Wheler-Galton, and from other members of the family. Purchases were made from sale rooms and private owners by Karl Pearson and other members of the Galton Laboratory during the following thirty years.

Biography of Sir Francis Galton (1822-1911)

Francis Galton was born in Birmingham on the 16th February, 1822. He was educated in Boulogne, Kenilworth and King Edward's School, Birmingham until the age of sixteen. He trained in medicine at Birmingham General Hospital and Kings College London until the spring of 1840 when he spent several months travelling through Europe, Turkey and Syria. On his return, 6 months later, he went up to Trinity College, Cambridge. There he read mathematics and medicine. He took his B.A. in January 1844. Later in that year when his father died, a generous inheritance allowed Galton to give up all thought of medicine as a career. He then devoted his life to travel, and to the study of a succession of virtually unexplored fields: the weather; physical and mental characters in man and animals; the influence of heredity on them; heredity in twins; fingerprints and personal identification. Late in his life he was zealous in advocating the study of "those agencies under social control that may improve or impair the racial qualities of future generations, either physically or mentally". He invented the word "eugenics" to describe this. He founded the Galton Laboratory of National Eugenics* at University College London to further his work.

Galton received many honours and awards. In 1851, he was awarded the Silver Medal of the French Geographical Society and in 1853 the Gold Medal of the Royal Geographical Society. In 1860, he was elected a Fellow of the Royal Society, in 1886 he was awarded the Gold Medal, in 1902, the Darwin Medal, and in 1910, the Copley Medal of the same society. He was given an honorary D.C.L. of Oxford University in 1894, and elected to an honorary Fellowship of Trinity College Cambridge in 1910. He was knighted in 1909.

Galton was one of the founders of the review journal The Reader (1864-66) With Karl Pearson and W.F.R.Weldon, he founded Biometrika in 1901, a journal for the statistical study of biological problems. Galton was Secretary to the Council of the Royal Geographical Society from 1857 to 1863; he was General Secretary of the British Association 1863-67; twice President of the Geographical Section and of the Anthropological Section of the Association. He was a member of the Council of the Royal Society

* Under Lionel Penrose, this name was changed to the Galton Laboratory, Department of Human Genetics and Biometry

several times between 1865 and 1884 and was Chairman of its Meteorological Committee and its Committee on Evolution. He was President of the Royal Anthropological Institute from 1885-1888.

Galton's family was closely connected with the Darwins. Erasmus Darwin was his grandfather and Charles Darwin his first cousin. He married Louisa Jane Butler in 1853. There were no children.

Explanation of the list

The list is divided into three main sections: papers relating to the personal history of Sir Francis Galton and his family; papers relating to Sir Francis Galton's scientific work and, thirdly, correspondence.

In the first section, the papers are arranged in alphabetical order of the names of members of the family; letters between FG, his parents and his brothers and sisters will be found at the end of this section.

In the second section, the papers are divided into subjects and are arranged chronologically within each subject; letters relating to a particular piece of scientific work have been left with the working papers connected with them.

The correspondence is arranged in alphabetical order of the letter writer. If letters were found pasted in books they were left there. One book, number 191, was so badly damaged that it had to be dismantled but the letters in it were left together in one folder and arranged alphabetically.

Access

The papers may be seen in the Manuscripts Room, The Library, University College London. An alphabetical card index is available there. Requisition is by the list number of the document; in addition the writer and date of a letter is required for correspondence.

Galton Laboratory and the Eugenics Record Office

From 1904, FG gave £500 annually to the University of London for the Eugenics Record Office, its staff and the Galton Research Fellow. Rooms were provided by University College London at 88 Gower Street. FG supervised the office until 1906 when he handed over to Karl Pearson. The function of the office was "to study those agencies under social control that may improve or impair the racial faculties of future generations physically and mentally". In 1907 the name was changed to the Francis Galton Laboratory of National Eugenics and the office was moved to the South Wing of University College. When FG died in 1911, he left the residue of his estate to the University of London for a professorship of Eugenics and expressed the wish that Karl Pearson should be the first holder of the chair. This wish was fulfilled. In 1963 while the Galton chair was held by Lionel Sharples Penrose the laboratory was renamed The Galton Laboratory, Department of Human Genetics and Biometry, University College, London

Notes on the Index

All entries are referred to by the List number.

In the case of item number 35, which is a paged and indexed Galton family book, there is also a page reference where it is appropriate. For example:

Price, Bartholomew, 35 p 355

There is a Card Index of the Galton Papers in the Manuscripts Room of the Library, University College London. It gives fuller details of each entry in this index.

It will be noticed that some entries in the index are given a List number but do not appear under that number in the List. This indicates that the person or subject is referred to in a document or letter and full descriptions will be found in the Card Index. For example:

Stacey, Jeanette, 152/5B
